

## Why risk a polymer when you can use an Exactmer?

### Business Development and Operations Executive – London Based

Exactmer is a new start-up, dedicated to producing precision polymeric molecules with our patented Nanostar Sieving Technology. Using this disruptive new platform, we are creating exquisite synthetic and biological polymers, including mono-disperse polyethylene glycols (PEGs), oligonucleotides, peptides and more.....most of them bound for use in medicines that enhance patient quality of life.

London-based, we are entering a rapid phase of growth and are seeking a self-starting, dynamic, flexible and committed individual to join our team. We are interested in outstanding individuals keen to work on creating long-term value for the business, reporting directly to the CEO Andrew Livingston.

You will work on a wide range of customer- and sponsor-facing business development challenges, including preparing proposals and quotations, dealing with agreements, working on pricing and market conditions, cultivating suppliers, reforming and updating our business and financial plans – working with passion to grow the business, at pace.

You will be at the centre of the operations of the company, working with our finance staff, expanding and improving our facilities, interacting with suppliers, reporting to customers and sponsors, developing our marketing materials and web presence, working to win media coverage and trade news – doing what is needed for the efficient functioning and promotion of the business.

Candidates should ideally have a scientific or engineering background with an ambition to develop and use business and operational skills, and a desire to learn fast about many different aspects of a start-up. Experience would be a bonus and we are open to candidates at different career stages, and also open to those interested in a part-time role.

To find out more, contact Andrew Livingston on [andrew.livingston@exactmer.com](mailto:andrew.livingston@exactmer.com). To apply, send Andrew your 2-page CV and a letter covering your background and interest in this role.
